Reading notes. Alternating pale-blue and white bands apply to complete year groups. A starred first date is the first arXiv submission date; its starred bracket is a preprint-to-publication interval, not publisher turnaround. Durations use days only below 30 days, months below one year, and years from one year onward. A dash means that the corresponding date or arXiv record was not identified.

Data note. ResearchGate’s live profile was security-restricted during compilation. The profile’s public search index reports 389 publications; this matrix contains 427 records reconciled from the associated Semantic Scholar author record, OpenAlex, Crossref, and arXiv metadata. One demonstrably unrelated namesake record (a malaria epidemiology paper) was excluded. This is therefore a metadata-reconciled portfolio, not a claim of a direct ResearchGate export.

Data snapshot. Public ResearchGate profile index, Semantic Scholar, OpenAlex, Crossref, and arXiv records, checked 12 August 2026. Metrics are dynamic and may change after this snapshot.
