Reading notes. Alternating pale-blue and white bands apply to complete profile-year groups. A starred first date is the first arXiv submission date; its starred bracket is a preprint-to-publication interval, not publisher turnaround. Publisher received dates are shown only when independently available; otherwise a dash is retained. Durations use days only below 30 days, months below one year, and years from one year onward. A dash means that the corresponding date or arXiv record was not identified. “n/a” means that the displayed author string does not identify B. P. Mandal. Profile years are retained even where publisher metadata gives a different online-publication year.

Data note. The public profile contains duplicate preprint/journal records, variant titles, incomplete entries, and at least one apparently mismatched authorship. Inclusion here reports the displayed profile and is not an independent authorship verification.

Data snapshot. Public Google Scholar profile, Crossref publication metadata, and arXiv records, checked 21 July 2026. Scholar metrics are dynamic and may change after this snapshot.
