Acknowledgements	x
List of Figures	xiv
1 Introduction	1
2 Mathematical preliminaries	14
2.1 Exceptional orthogonal polynomials	14
2.2 X_1 -Exceptional Orthogonal Polynomials	15
2.2.1 X_1 -Jacobi EOPs	16
2.2.2 X_1 -Laguerre polynomials	18
2.3 X_m -Exceptional Orthogonal Polynomials	20
2.3.1 X_m -Jacobi polynomials	20
2.4 X_m -Laguerre polynomials	21
2.5 Supersymmetry in quantum mechanics	22
2.5.1 Eigenvalues and Eigenfunctions of partner Hamiltonians	24
2.5.2 Hierarchy of Hamiltonians	26
2.6 Shape Invariance	27
2.7 Point Canonical Transformation Approach	29
2.8 Group Theoretic Approach	30
3 Supersymmetry, shape invariance and exceptional orthogonal polynomials	33
3.1 X_1 -Exceptional Orthogonal polynomials	33
3.1.1 X_1 -Jacobi Orthogonal polynomials	34
3.1.2 X_1 -Laguerre polynomials	36
3.2 X_m -Exceptional orthogonal polynomials	38
3.2.1 X_m -Jacobi orthogonal polynomials	38
3.2.2 X_m -Laguerre orthogonal polynomials	41
3.3 Conclusion	43
4 Potentials in Position-Dependent Mass Background and Exceptional Orthogonal Polynomials	45

4.1	Schrödinger Equation in PDM framework	46
4.2	Generation of new potential by PCT approach	47
4.2.1	Case 1	49
4.2.2	Case 2	51
4.3	Supersymmetric approach	56
4.4	Results and Discussions	61
5	QES potentials and zero energy normalizable states for an extended class of truncated Calogero-Sutherland model	63
5.1	The conventional TCS model	64
5.2	Extended truncated Calogero-Sutherland model	65
5.3	Normalizable zero-energy quantum states	68
5.4	Result and discussion	73
6	Summary and Prospective	75
A	Jacobi polynomials	80
B	Laguerre polynomials	82
